FIRST YEAR | College Fest Website

Level: Foundation | Suggested build time: 3 hours

Scenario

Your college is hosting a technical and cultural festival. The organizing team needs a responsive website to present events and guide visitors. Each team receives one theme (for example, Retro, Space or Nature) and must apply it consistently.

Input data

Field	Example
Theme	Space
Event	Code Sprint
Category	Technical
Date / time	12 Feb, 10:00 AM
Venue	Lab 2
Contact email	fest@example.edu

Use at least six sample events, with at least two categories and two dates. Data may be hard-coded or stored locally.

Mandatory tasks

- Create a themed homepage with festival name, date and prominent navigation.
- Show event cards with title, category, date/time and venue.
- Provide a readable day-wise or time-wise event schedule.
- Create a contact/registration form with required-field and email-format validation.
- Make the layout usable on mobile and desktop widths.

Analytical challenge

Allow visitors to filter events by category or day. Explain briefly how the schedule remains readable when events share a time slot.

Expected output

A browser-ready website with working navigation, event listings, schedule, validated form and filter. Form submissions may display an on-screen confirmation; no backend is necessary.

Constraints

Frontend only is acceptable. No payment gateway, login, live registration database or external API is required. Do not rely on a prebuilt screenshot or nonfunctional mockup.

Evaluation criteria (100 points)

Criterion	Points
Core functionality	30
Visual design and theme consistency	25
Responsive usability	20
Code organization	15
Filtering and reasoning	10
